

How to switch GoVoIP to make calls using cell instead of through the app

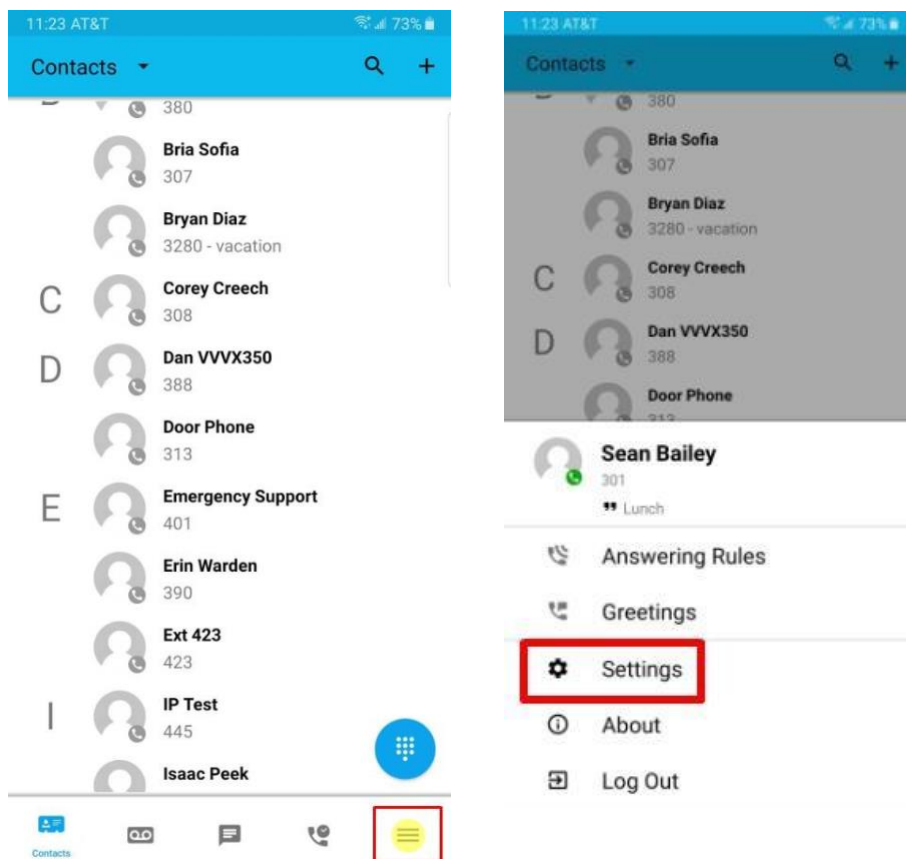

1. Login to the GoVoIP app using provided credentials.

Host ID: Ask Your Provider

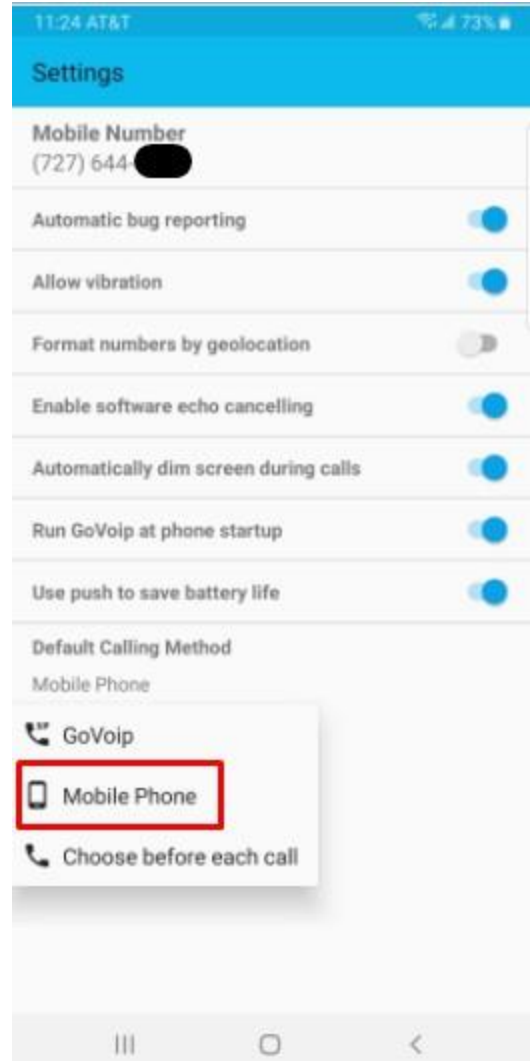

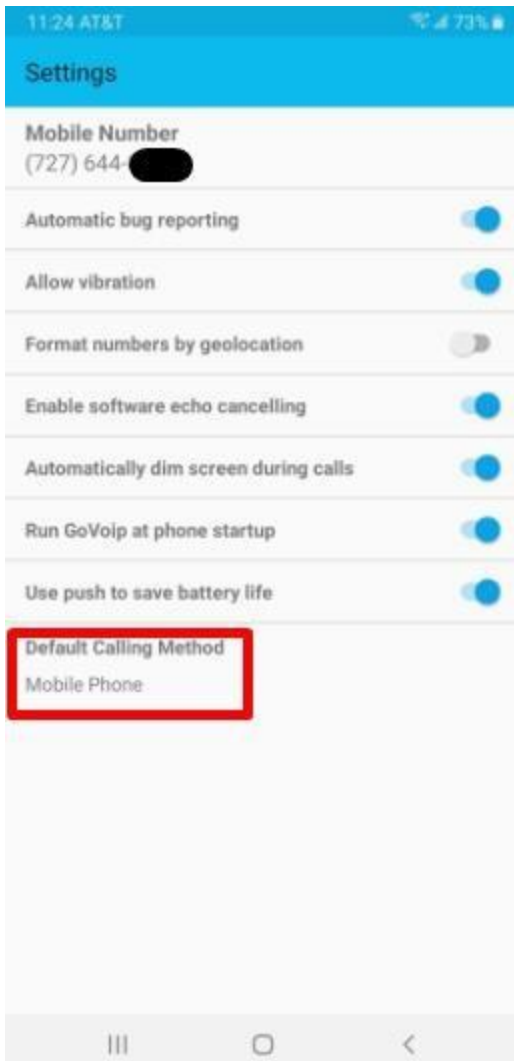

User: Portal User (ext@domain)

Pass: Portal Password

2. Once logged in click the three lines to bring up the menu. Then click on settings. (see below)

- Once in settings you should see your cell number at the top and at the bottom you can change the default calling method to Mobile Phone. See below

- Once that change is made you can dial a number like normal in the app and our system will make a call to your mobile phone. Once you answer it will ring out to the person you are trying to reach.
